**DETAILED ACTION**

***Reasons for Allowance***

1. Claims 1-6, 8, 10 and 12 are canceled.
2. Claims 7, 9, 11 and 13-16 are allowed.
3. This is examiner's statement of reasons for allowance.

Regarding claims 7 and 9 the prior art, either singularly or in combination, does not teach or suggest an image processing method for a multi-function image processing apparatus (MFP) that is coupled to a network, the method comprising:

- a) receiving a local image processing request, the local image processing request not being received by way of the network;
  - b) processing the local image processing request;
  - c) receiving a network image processing request sent over the network while the MFP is processing the local image processing request;
  - d) denying the network image processing request;
  - e) completing the local image processing request started in step b); and
  - f) placing the MFP in a mode that is capable of accepting a new processing request,
- wherein the new processing request may be either another local image processing request, the network image processing request denied in step d), or another network image processing request wherein the local image processing request is at least one of a copy, scan or print request, wherein, when the MFP is processing the first job request and another local image processing request, not sent over the network, is received by the MFP, the method further comprising:

g) temporarily halting processing of the first job request and storing data regarding the processing of the first job request in memory;

h) processing the another local image processing request to completion; and

i) completing the first job request from a point where the first job request was halted in step g).

Regarding claims 11 and 13-16, the prior art, either singularly or in combination, does not teach or suggest an image processing method for a multi-function image processing apparatus (MFP) that is coupled to a network, the method comprising:

a) receiving a network image processing request sent over a network;

b) processing the network image processing request;

c) receiving a local image processing request, not sent over the network, while the network image processing request is still being processed;

d) temporarily halting processing of the network image processing request;

e) processing the local image processing request to completion; and

f) continuing processing of the network image processing job request from a point where the network image processing request was halted in step d); wherein the step of processing the network image processing request comprises using an image processor that comprises a first FIFO that receives network image data of the network processing request and a second FIFO that sends network image-processed data, and wherein the step of temporarily halting processing of the network image processing request comprises halting a clock provided to the first FIFO and the second FIFO.

The features identified, in combination with other claim limitations, are neither suggested nor discussed by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
